

Q1. Box Plot

Write a Python program using **Seaborn** to draw a **box plot** showing the distribution of marks obtained by students in three subjects: Mathematics, Physics, and Chemistry.

Given data:

- Mathematics: [65, 70, 75, 80, 85, 90]
- Physics: [60, 68, 72, 78, 82, 88]
- Chemistry: [62, 67, 74, 79, 84, 89]

Add an appropriate title.

Q2. Pair Plot

Write a Python program using **Seaborn** to create a **pair plot** for the following dataset:

Feature	Values
Height	150, 155, 160, 165, 170
Weight	50, 55, 60, 65, 70
Age	18, 19, 20, 21, 22

Use the pair plot to analyze relationships between variables.

Q3. Heat Map

Write a Python program using **Seaborn** to plot a **heat map** representing the correlation matrix of a dataset containing the following variables:

- Sales
- Profit
- Discount
- Quantity

Display correlation values on the heat map.
